

SYSTEM DEPLOYMENT AND LICENSING

SYSTEM DEPLOYMENT PLAN

The following is included in the SCT BusinessPilot deployment plan:

- Deployment and configuration of your central data storage system.
- Development and Design of your SCT BusinessPilot application or applications.
- We will personally migrate and move your business data from your previous system or platform to your SCT BusinessPilot.
- Personal installation of your BusinessPilot application or applications completed on site. This is done by our own IT department.
- Training for all your staff on how to use the System. Completed in groups of user types. (Admin users, management, general staff, sales, accounting, inventory, etc...)
- SCT installation flash drives containing the application with a step by step installation process to easily install more applications at a future date.

DEPLOYMENT TIME-FRAME

The time it takes to complete the deployment varies based on the size of the system. Companies which require multiple applications or larger data migration will require longer deployment times. For a standard single application system a deployment time of 14-21 days is estimated.

SYSTEM LICENSING

The following is included in your SCT BusinessPilot license:

- A maintained connection between your BusinessPilot application or applications and your central data storage system.
- Updates and upgrades to your system's security and functionality.
- Regular secure offline back-ups of all your data to ensure that no important data is lost.
- 24/7 support via call, instant messaging or email.

SYSTEM LICENSE SUBSCRIPTION

System license subscriptions are billed monthly via a debit order.

Please note that without an active system license your application will not have a connection to your central data storage system and thus no access to the system as a whole.
